

AYP – Adequate Yearly Progress for Public Schools and Districts

In the 2011 State Report Card, 6 public districts and 87 public schools were identified for improvement. Of the districts identified for improvement, 66% are high-density districts. All high-density districts had at least one school identified for school improvement and 66% of the schools in one level or another of school improvement are from the high-density districts. At this time, there are no identified districts or schools on the 2012 State Report Card with the changes

For more information about specific districts and schools, see [2011 AYP Data with Native American Data](#).

2012 Dakota STEP Data

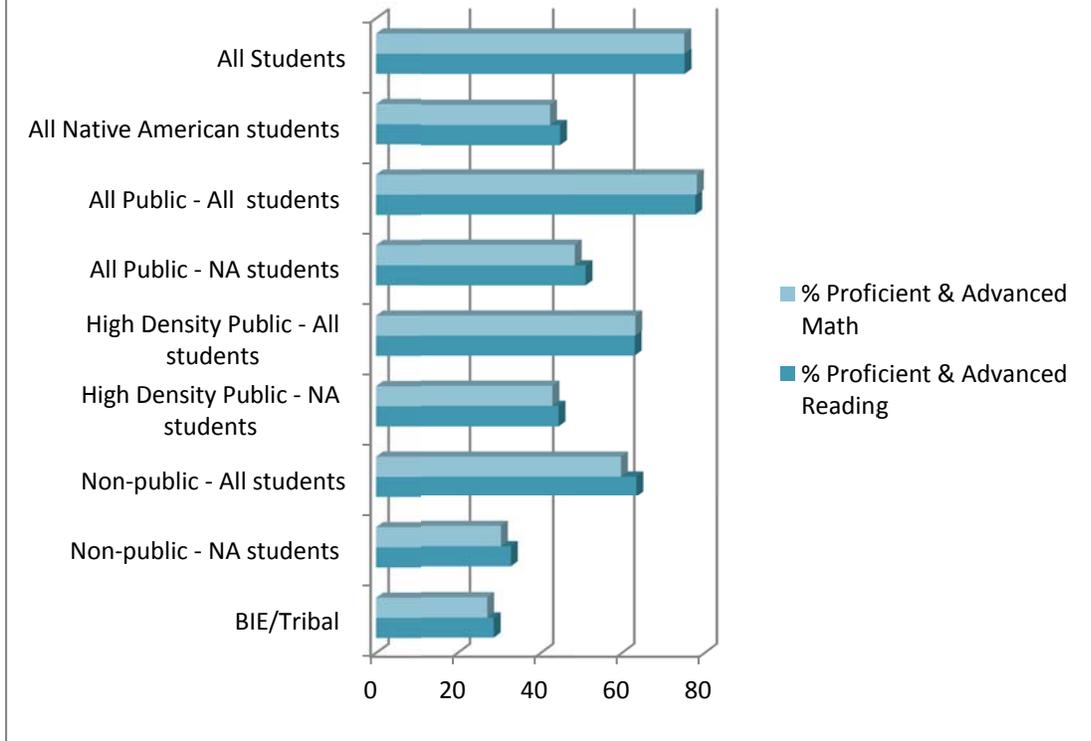

The following graphs and tables disaggregate student data using the available data from the South Dakota Assessment Portal. All students who took the DSTEP in 2012 are included in these displays.

Grade bands similar to how AYP data have been reported for the public schools present the data.

High-density public schools are districts with 18% or more the enrolled students declare Native American for their race/ethnicity. BIE/tribal schools include data for all students attending Cheyenne-Eagle Butte schools, BIE or public, as it was not possible to disaggregate further with the data set.

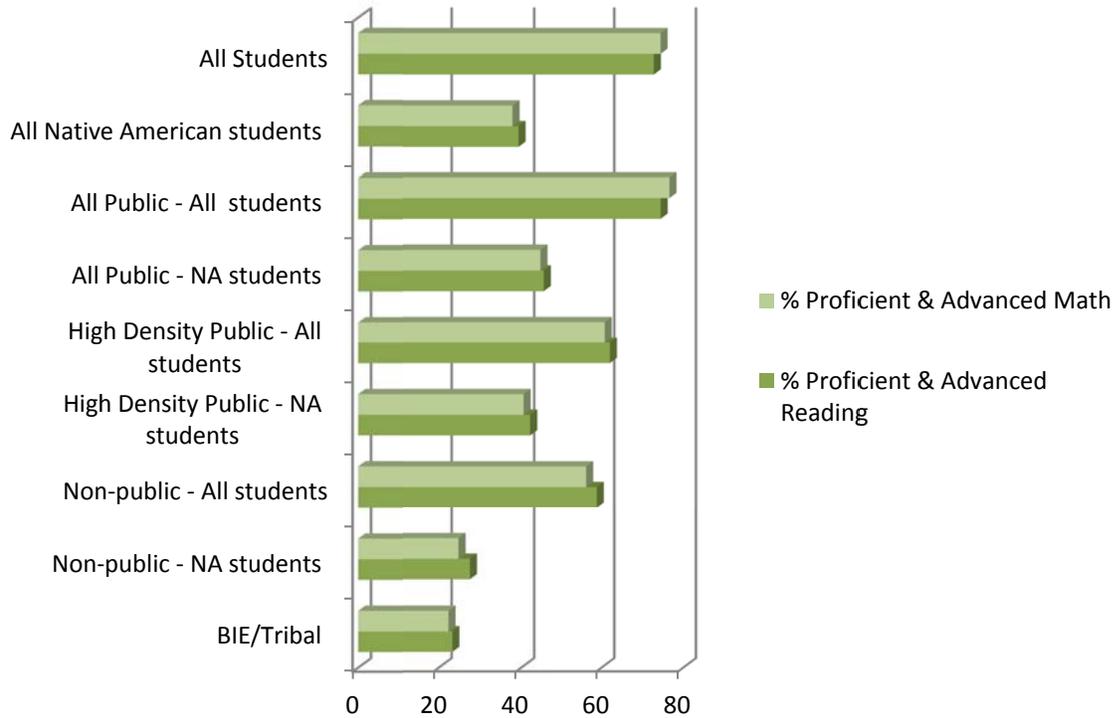

Longitudinal data for 2007 – 2012 will be coming shortly.
